

AMENDED CLAIMS

This listing will replace all prior versions of the claims in the application.

We claim:

1. (cancelled)
2. (cancelled)
3. (cancelled)
4. (currently amended) A laser device comprising:
 - a) a plurality of laser energy sources housed within a hand-held wand for generating a plurality of laser beams in which at least a first laser beam is a cool color and at least a second laser beam is a warm color and wherein at least two of the laser beams are emitted substantially simultaneously; and
 - b) an optical arrangement for receiving at least one laser beam and for transforming at least one laser beam into a desired spot shape, wherein the desired spot shape is substantially linear.
5. (cancelled)
6. (cancelled)
7. (cancelled)
8. (cancelled)
9. (cancelled)
10. (currently amended) A laser device comprising:
 - a) a plurality of laser energy sources for generating a plurality of laser beams in which at least a first laser beam is a cool color and at least a second laser beam is a warm color;
 - b) a wand from which the laser beams emit, the wand housing the laser energy sources within and being capable of being retained in a hand of a user and freely moved relative to the surface of the skin of a patient; and

- c) an optical arrangement attached to the wand for receiving the laser beams and for transforming each of the laser beams into a desired spot shape;
wherein at least two of the laser beams are emitted substantially simultaneously.

- 11. (cancelled)
- 12. (cancelled)
- 13. (cancelled)
- 14. (previously amended) A device according to claim 10 wherein at least one of the spot shapes is substantially linear.
- 15. (previously amended) A device according to claim 10 further comprising a first laser beam having a first spot shape and a second laser beam having a second spot shape wherein the first spot shape is substantially linear and the second spot shape is circular.
- 16. (previously amended) A device according to claim 10 further comprising a control circuit for controlling the pulse frequency of each laser beam.
- 17. (original) A device according to claim 16 wherein the pulse frequency of at least one of the laser beams is such that the laser light emitted is substantially continuous.
- 18. (original) A device according to claim 16 further comprising a first laser beam having a first pulse frequency and a second laser beam having a second pulse frequency wherein the first pulse frequency is such that the laser light emitted is substantially continuous and the second pulse frequency is not zero.
- 19. (original) A device according to claim 16 wherein the pulse frequency of the second laser beam is less than 100,000 Hz.
- 20. (previously amended) A laser device comprising:
 - a) a plurality of laser energy sources for generating a plurality of laser beams in which at least a first laser beam is a cool color and at least a second laser beam is a warm color;

- b) an arm which houses the plurality of laser energy sources and from which the laser beams emit, the arm being capable of being freely positionable in the x-, y-, and z-axes; and
 - c) an optical arrangement attached to the arm for receiving the laser beams and for transforming each of the laser beams into a desired spot shape.
21. (original) The device according to claim 20 in which the first laser beam is green.
22. (previously amended) The device according to claim 20 in which the second laser beam is red.
23. (currently amended) A device according to claim 20 wherein at least two of the laser beams are emitted substantially simultaneously.
24. (original) A device according to claim 20 further comprising a controller for independently controlling the generation of laser energy by each of the plurality of laser energy sources.
25. (original) A device according to claim 20 wherein each of the laser energy sources is less than one watt.
26. (original) A device according to claim 20 wherein at least one of the laser energy sources is a semiconductor diode.
27. (original) A device according to claim 20 wherein at least one of the spot shapes is substantially linear.
28. (original) A device according to claim 20 further comprising a first laser beam having a first spot shape and a second laser beam having a second spot shape wherein the first spot shape is substantially linear and the second spot shape is circular.
29. (previously amended) A device according to claim 20 further comprising a control circuit for controlling a pulse frequency of each laser beam.
30. (cancelled)
31. (original) A device according to claim 20 further comprising a first laser beam having a first pulse frequency and a second laser beam having a second pulse frequency wherein the first pulse frequency is such that the

laser light emitted is substantially continuous and the second pulse frequency is not zero.

32. (previously amended) A device according to claim 31 wherein the pulse frequency of the second laser beam is less than 100,000 Hz.
33. (cancelled)
